

DIGITAL GOLD • DGD

Ambassador Video Handbook

How to make high-quality, educational short-form videos about Digital Gold using free AI tools — and stay compliant on every platform.

Educate • Don't sell

A companion to the DGD Ambassador Video Wiki | June 2026 | Not financial, investment, legal, or tax advice

CONTENTS

What's inside

- **1 · The one rule that governs everything**

Educational, never investment framing — and why it's load-bearing

- **2 · What is Digital Gold?**

The subject you teach, in plain language

- **3 · The Six Pillars of Perfect Money**

Your evergreen content backbone

- **4 · Say this, not that**

The phrase cheat-sheet + disclosure rules

- **5 · Positioning: safe harbor & anti-degen**

Two sharp angles — and their two traps

- **6 · Platform rules at a glance**

TikTok, Instagram, YouTube, X

- **7 · The free AI toolkit**

Every tool you need, \$0

- **8 · Make your first video**

An end-to-end free workflow

- **9 · What makes short-form spread**

Hooks & viral principles, the honest way

- **10 · Pre-publish checklist**

Run it before every post

HOW TO USE THIS HANDBOOK

This PDF is the portable summary. The full, interlinked **DGD Ambassador Video Wiki** (38 pages) lives in your AmbassadorAI folder with tool comparisons, a 50+ hook library, prompt templates, and a ready-to-shoot 8-episode script pack. When a tool price or platform rule here looks dated, check the wiki — it's maintained and these things change fast.

SECTION 1

The one rule that governs everything

Your job as an ambassador is to **educate, not sell**. You explain how Digital Gold and sound-money ideas work. You never call it an investment, never predict the price, never promise anyone will make money.

This isn't just good taste. The Digital Gold Foundation's White Paper (§12.11, "Marketing and Communications Discipline") commits the Foundation and everyone speaking for it to communications that:

- do **not** characterize DGD as an investment,
- do **not** project specific price appreciation,
- do **not** promise returns from any activity,
- do **not** solicit participation on the basis of expected profits.

DGD's entire legal posture is that it is **not a security** — and that argument depends partly on the consistency of public statements with the design. As a rewarded ambassador in the **promotional pathway**, your posts are part of that public record. One ambassador shouting "DGD is going to \$100k, get in early" weakens the structure for everyone.

THE ONE-QUESTION TEST

Before any line of script, ask: **"Am I teaching an idea, or selling an outcome?"**

Teaching an idea (how inflation works, what the six pillars are) → allowed. Selling an outcome (you'll profit, it'll rise, get in early) → never.

IF SOMEONE ASKS "WILL I MAKE MONEY?"

Safe answer: *"I can't tell you that, and I won't — I'm not a financial advisor and this isn't investment advice. What I can do is explain how the system is designed. Whether it's right for you is your call after your own research."*

SECTION 2

What is Digital Gold?

Digital Gold (DGD) is a Layer-1 cryptocurrency designed to behave like sound, wealth-preserving **money** — not a speculative bet.

Created by John Wright Gotts, founder of the Digital Gold Foundation (developed 2014–2026). The founder funded development personally and donated the finished coin to the Foundation. It responds to a simple problem: government money loses value — the US dollar has lost more than **96% of its purchasing power since 1913**, and a 2%-a-year inflation target erodes roughly half a lifetime's savings.

What makes it structurally different

Idea	In plain terms
Built to be spent	A single, stable price (no fluctuating bid/ask) so a merchant can hold it and pay suppliers — letting it circulate through a whole supply chain instead of being converted to dollars instantly.
Fair distribution	Proof-of-Participation releases coins gradually as the network grows (1,000 → 80 million users), split among all current users — not hoarded by insiders.
A real yardstick	The Crypto Fair Value (CFV) formula values coins against a fixed benchmark (Bitcoin's fundamentals frozen at Dec 2024) instead of pure speculation.
Not a security by design	Rules fixed at inception that can't be changed; no staking rewards; fees burned; no company profiting from operation.

Headline design facts (state as design, never as a profit pitch)

Feature	Design value
Total supply cap	21,000,000 coins (19M circulating, 2M treasury)
Distribution driver	N = current number of users
Consensus	Hybrid Proof-of-Work + Proof-of-Stake, with SegWit
Block time / fees	64 seconds / transaction fees burned
Privacy	Native Tor V3 onion support

NEVER DO THIS

Never turn the price-curve numbers into a profit pitch ("get in before it hits \$100k"). They describe a **distribution mechanism**, not a promise or prediction. This is the single most common compliance mistake.

SECTION 3

The Six Pillars of Perfect Money

Synthesized from the Austrian economists (Menger, Mises, Hayek). Each pillar is a ready-made, evergreen video topic — and you can teach every one without ever telling anyone to acquire DGD.

1

Scarcity. Supply limited by transparent, predictable rules.

DGD design answer: 21M cap that can't be increased. (The US money supply grew ~7,000% in a century.)

2

Stable Pricing. Purchasing power stays roughly constant.

DGD design answer: Price advances along a fixed curve tied to real adoption, not speculation.

3

Free Adoption. Money is chosen, not imposed by decree.

DGD design answer: Participation is fully voluntary at every step.

4

Decentralized Governance. Rules, not rulers; no one can alter policy.

DGD design answer: Rules set at inception and unchangeable — the 'inversion of governance.'

5

Freedom to Transact. Use without surveillance or permission.

DGD design answer: Native Tor V3 support for private, encrypted transactions.

6

Adequate Circulation. Must actually flow through the economy.

DGD design answer: Single-price design lets it circulate the full supply chain.

TURN IT INTO A SERIES

Six pillars = a 6-part video series (one per pillar) plus an intro and a synthesis. A complete, ready-to-shoot 8-episode script pack is in the wiki at [templates/six-pillars-series-scripts.md](#).

SECTION 4

Say this, not that

The rules apply to everything the viewer sees and hears — script, captions, on-screen text, thumbnails, and hashtags.

Don't say	Say instead
"DGD is a great investment"	"DGD is a monetary system designed to work like sound money"
"It's going to \$100k / to the moon"	"The price advances along a fixed curve as the network grows"
"Get in early before it rises"	"Here's how the distribution is designed to work"
"You'll make money / passive income"	"No one earns income from operating the network — fees are burned by design"
"Guaranteed returns"	"Nothing here is guaranteed — the white paper says so itself"
Buy now / link to buy in bio	"Read the white paper / official channels to learn more"

Avoid entirely

- invest, returns, ROI, profit, gains
- moon, 100x, pump, early, get in
- guaranteed, risk-free, passive income
- "the next Bitcoin", price target, undervalued

Safe & on-brand

- money, currency, sound money, scarcity
- purchasing power, circulation, protocol
- monetary design, valuation method
- Austrian economics, educational, mechanics

Disclosure — required when you're rewarded for posting

Earning DGD recognition is a **material connection**, so the FTC and every platform treat your content as commercial. Disclose in **three** places, up front (not buried after 15 hashtags):

Layer	What	Where
Sponsorship (FTC)	"Sponsored / ambassador"	spoken in first ~3s + on-screen + start of caption + platform branded-content toggle
AI content	"AI voice / visuals"	platform AI label + small on-screen note (only when media is realistic)
Not advice	"Not financial advice"	spoken + caption

FTC penalties for missing disclosure on financial promotions can run \$51,000+ per violation and stack across posts. A disclosure says you were rewarded — it does **not** let you make investment claims. Always both: disclosure + discipline.

SECTION 5

Positioning: safe harbor & the anti-degen angle

Two of DGD's strongest talking points double as its two easiest ways to get in trouble. Frame them right and they cut through a noisy market; frame them wrong and you break the discipline — and the law.

"Safe harbor" is legal, not financial

In 2026 a new framework split crypto into categories; most coins are "**digital commodities**," which are **not securities** — as long as their value comes from the protocol and supply and demand *"rather than from expectations of profit."* DGD is designed to fit that box: fixed 21M supply, self-funded, no company running it for profit. So "**a safe harbor coin**" means "**designed to stay outside securities law**" — it does not mean a safe investment or safe haven.

THE TRAP

The digital-commodity status depends on value coming from the protocol, **not** from profit expectation. So framing DGD as a money-maker doesn't just break the rules — it hands a regulator the argument that DGD *is* a security. **Safe harbor is about the law, not your wallet.**

Don't say

- "Safe harbor = safe investment / safe haven"
- "Regulators approved it"
- "Park your money here to be safe"

Say instead

- "Designed to stay outside securities law"
- "Designed to *align* — a reasoned position, not approval"
- "A digital commodity: money, not an investment haven"

The anti-degen angle: "boring on purpose"

"Degen" (degenerate) is crypto slang for high-risk gamblers chasing 100x plays. DGD is the philosophical **opposite** — "not a speculative instrument." That contrast is your sharpest, most contrarian hook. The move: **speak to the degen audience, don't sell a degen play.**

Do

- Use the casino contrast: "the anti-casino coin"
- Borrow lingo to hook attention ("tired of getting rekt?")
- "Stop gambling, start understanding money"

Don't

- "Ape into DGD" / "next 100x gem"
- "This is the bag that prints"
- Anything implying gains or a winning bet

READY-TO-SHOOT PACKS

The wiki includes two full ready-to-shoot script series on these angles — *"Is It a Security?"* and *"Casino vs Money"* (8 episodes) — plus audience-by-audience framing in *craft/positioning-and-audiences.md*.

SECTION 6

Platform rules at a glance

Educational crypto content is generally allowed everywhere. Promoting a specific coin "to buy" generally is not. Cross-posting one video? Satisfy the **strictest** platform in each row.

Requirement	TikTok	Instagram	YouTube	X
Educational crypto OK	Yes	Yes	Yes	Yes
Promote coin "to buy"	No	No	No	Avoid
Branded-content label	Required	Paid Partnership	Paid promotion	Paid partnership
In-video disclosure (video)	Yes	Yes (first 3s)	Yes	Yes
Label realistic AI media	Yes	Yes	Mandatory	Yes

The strictest is TikTok

TikTok bars crypto/financial services in branded content for ordinary creators, but allows **educational** blockchain/crypto content. Frame as education about money, never promotion of a product to buy. If a video is borderline on TikTok, it's borderline everywhere — fix it.

YouTube = mandatory AI labels

Realistic altered/synthetic content must be disclosed (Studio → "Altered content"). Production-assistance AI (scripts, ideas, captions, basic edits) needs no label. Titles are searchable — write clear, true ones.

Platform policies change frequently — verify each platform's current Help Center before relying on this. Full detail in the wiki's compliance section.

SECTION 7

The free AI toolkit

Everything you need to make a polished short-form video for \$0, by job. Free tiers shift monthly — treat specifics as "last known" (verified June 2026) and re-check each tool's site.

Step	Job	Free picks (Jun 2026)
1	Script & ideas	ChatGPT, Claude, Gemini (free tiers)
2	Voiceover	ElevenLabs (free), Microsoft Edge Read Aloud, or your own voice
3	AI video / b-roll	Google Veo (via Gemini), Kling AI, Hailuo, Pika
3b	Images / thumbnails	Bing Image Creator, Gemini/Imagen, Adobe Firefly (commercially safe), Leonardo
4	Edit + captions	CapCut (free full editor, auto-captions, no watermark on most exports)
5	Music / sound	YouTube Audio Library, Pixabay, Uppbeat

STARTER STACK

Script in ChatGPT/Claude → voice in ElevenLabs (label it AI) or your own voice → abstract b-roll from Veo/Kling + title cards from Bing/Firefly → edit & caption in CapCut → music from YouTube Audio Library.

TWO WATCH-OUTS

Watermarks from one app can get a video down-ranked on another — prefer no-watermark free exports. **Trending commercial songs** are usually licensed for personal use only; since your content is commercial, use cleared libraries instead.

SECTION 8

Make your first video

The "faceless explainer" workflow — about 1–2 hours, no camera needed. (A talking-head version builds even more trust; see the wiki.)

- 1 Script.** Use a guardrailed AI prompt (the wiki's prompt library bakes in the compliance rules). Fact-check every figure against the white paper.
- 2 Voice.** ElevenLabs or Edge Read Aloud — or record your own (more trust, no AI-voice label needed). Label synthetic voices.
- 3 Visuals.** Generate *abstract, illustrative* b-roll — gold, eroding cash, supply-chain flow, network animations. Avoid realistic fake people or events.
- 4 Edit + caption.** In CapCut: assemble, auto-caption, **proofread names/numbers**, add disclosure overlays.
- 5 Music.** Cleared library track, ducked under the voice.
- 6 Compliance pass.** Run the checklist (Section 9). Then post — vertical 1080×1920, disclosure front-loaded, caption/hashtags tailored per platform.

BATCH FOR CONSISTENCY

Script a whole series in one AI session, then batch voiceovers → b-roll → edits on a reusable CapCut template. A half-day can make a week of content.

SECTION 9

What makes short-form spread

On a swipeable feed in 2026, the keep-or-scroll decision happens at or before **one second**. Your first frame + first words are the whole game — and you can win on curiosity, never hype.

The algorithm rewards

- Replay rate
- Watch-through / completion
- "Stop-scroll" click-through
- Shares
- Like-to-view & comments

For Shorts, replays and shares matter more than raw watch time — which favors short, dense, re-watchable explainers.

Hook frameworks that work

- **Contrarian claim:** "Most crypto payments aren't actually money."
- **Mistake warning:** "If you think inflation is just prices going up, you're missing the story."
- **List tease:** "6 things real money needs — most currencies fail one."
- **Shocking number:** "The dollar lost 96% of its value since 1913."

Your lane: educational virality without hype

You don't need "to the moon" energy (it's banned anyway). Your engine is **curiosity**, **counter-intuition**, **usefulness**, and **clarity**. The best DGD video is one that's valuable even to someone who never acquires a coin. People share things that make them look smart — give them that.

WRITE 5 HOOKS, PICK 1

The hook is ~80% of performance. Keep it ≤8 words, create an open loop, pair it with a strong first frame, and put it on screen as text too. A 50+ hook library is in the wiki.

Pre-publish checklist

Run this before every post. If any Compliance box fails, do not publish until it's fixed.

Compliance (all must pass)

- No investment framing; nothing implies financial gain.
- No price prediction; no "\$X target," "moon," "early."
- No return/profit promises ("returns," "ROI," "passive income").
- CTA is "learn more / read the white paper / follow" — never "buy."
- Banned-word scan done on script, captions, on-screen text, thumbnail, hashtags.
- FTC disclosure present (spoken + on-screen + caption + platform toggle).
- AI disclosure present if media is realistic synthetic.
- "Not financial advice" stated.
- Every figure verified against the white paper.
- No realistic fake people/events; no false attribution.

Quality

- Hook lands in the first second.
- One idea, clear payoff.
- Captions burned in & proofread.
- Visual change every ~2s.
- Clean audio; music ducked.
- Loop-back / soft CTA to end.

Technical

- 1080×1920, 9:16, MP4.
- Text inside the safe zone.
- No unwanted watermark.
- Music cleared for commercial + this platform.
- Caption/hashtags tailored per platform.

THE FINAL GUT CHECK

"If a viewer never acquires a single coin, is this still a useful, honest, educational video?" If no — it's a pitch, not education. Rewrite before posting.

This handbook summarizes the DGD Ambassador Video Wiki (maintained in your AmbassadorAI folder). Tool prices and platform policies were verified June 2026 and change often — re-check source links in the wiki. Nothing here is financial, investment, legal, or tax advice. DGD facts are drawn from the Digital Gold White Paper.
